EXPERIENCE

ZETHETA ALGORITHMS PVT. LTD. || Data Scientist Intern
July 2026 -- Aug 2026

- Developed AI and machine learning solutions using Python, statistical analysis, and data-driven modeling to generate insights from complex datasets.
- Applied machine learning and statistical methods to analyze, model, and evaluate risk across physics and financial domains.

ACHIEVEMENTS

RESEARCH

- Published **GroMart** research paper in **IJCRT** (2025–26), Impact Factor: 9.17*. **Paper Link**
- Research paper on **MindTrace AI** under review in **Springer Nature – Data Science and Engineering Journal** (DSEJ, IF: 4.2), a Q1 journal.

*IJCRT metric calculated using Google Scholar/Semantic Scholar methodology.

PROJECTS

ML MODEL MONITORING & DRIFT DETECTION | FastAPI, Node.js, React, SHAP, Docker
2026 -- Present | **Github Link** (Private Repository)

- Developed an end-to-end ML model monitoring framework covering 25+ automated tests across univariate, multivariate, data-quality, data-drift and concept-drift scenarios.
- Integrated 8 statistical drift detection methods including KS Test, Chi-Square, PSI, Wasserstein Distance, Jensen-Shannon Divergence, CUSUM, PCA-Mahalanobis, and MAE-based concept drift with SHAP feature importance.

AGENTIC RESEARCH & COMPLIANCE AUDITOR (SELF-RAG) | Python, LangGraph, ChromaDB, FastAPI, Langfuse
2026 | **Github Link**

- Architected an Agentic RAG system using LangGraph featuring adaptive query routing, self-corrective reflection loops, and fallback web search to audit compliance documents.
- Designed structured prompt engineering pipelines with Pydantic validation and implemented loop engineering safeguards to prevent non-terminating agent cycles.
- Optimized tokenomics by achieving a 35%+ reduction in token usage via semantic chunk deduplication and dynamic context pruning, while tracking real-time cost observability with Langfuse.

MINDTRACE AI+ | REAL-TIME EMOTIONAL INTELLIGENCE SYSTEM | React, Node.js, Python FastAPI, NLP, MongoDB
2026 | **Github Link**

- Developed an AI-based multimodal system using NLP, Hugging Face Transformers, and Computer Vision to analyze textual and visual data in real time.
- Developed an LLM-powered AI chatbot for semantic analysis and personalized responses using NLP techniques.

EDUCATION

KIT'S COLLEGE OF ENGINEERING, KOLHAPUR
B.Tech in CSE (Data Science)
Aug 2023 -- Present
CGPA (upto 6th sem): 8.5 / 10.0

SKILLS

Programming: Python, C, Java
Frameworks: FastAPI, Flask, Streamlit, React, Node.js
Cloud & MLOps: AWS (EC2, S3), GCP, Docker, MLflow, DVC, Git
ML/DL: Scikit-Learn, TensorFlow, PyTorch, XGBoost, Computer Vision, Transformers, Supervised/Unsupervised ML, Hyperparameter Tuning, Feature Selection, SHAP
AI/GenAI: Generative AI, LLMs, NLP, RAG, Hugging Face, Semantic Analysis, Embeddings
Data & Statistics: pandas, NumPy, EDA, Data Analysis, Feature Engineering, Statistical Analysis, Hypothesis Testing, Descriptive Statistics
Databases: MySQL, SQL, PostgreSQL, MongoDB
Modeling: Model Evaluation, Model Monitoring, Drift Detection, Model Deployment

CERTIFICATIONS

Google Data Analytics – Coursera **Verify**
Spring Boot React JS Full Stack – Udemy **Verify**
